ITEA Awards of Excellence 2024

The AIToC project has received the ITEA Awards of Excellence 2024 in the "Business impact" category!

We're proud to have participated as a project partner, contributing with our expertise within process planning and visualization of work instructions. Along with us, the project has involved 29 industrial partners from Sweden, Finland, Germany and Turkey.

Manufacturing engineers face significant challenges in creating digital models for production systems due to the complexity of product variants, the need for customised tools, and the manual efforts required to overcome deficiencies in current product and production definitions. Using advanced AI, the ITEA project AIToC* has created a set of tools that overcome these challenges. These tools help with planning processes, the creation of models of factories, and the design of better layouts for assembly stations, all of which make manufacturing more efficient and effective. The AIToC project received the 2024 ITEA Award of Excellence in the category 'Business impact' for this great achievement." – *itea4.org*
