

# Exploitable Results by Third Parties

## 16001 SPEAR

---

### Project details

Project leader:	Dr. Anton Strahilov
Email:	anton.strahilov@eks-intec.de
Website:	<a href="https://spear-project.eu/">https://spear-project.eu/</a>

Name: rfFmu2Aml (CA)		
Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>▪ FMUs</li> <li>▪ AML project file</li> </ul>	<ul style="list-style-type: none"> <li>▪ Import AML project files</li> <li>▪ Import FMU models (Version 1.0&amp; 2.0)</li> <li>▪ Define FMU start input signals</li> <li>▪ Link FMUs to devices into AML</li> <li>▪ Export AMLX file with linked FMUs</li> </ul>	<ul style="list-style-type: none"> <li>▪ AMLX</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>▪ Import AML project files based on AutomationML standard</li> <li>▪ Import FMU models based on Functional Mock-up Interface standard</li> <li>▪ Export AMLX containers based on AutomationML standard</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>▪ FMU must be on FMI standard 1.0 and 2.0</li> <li>▪ AML files must be exported from DELMIA &amp; ProcessSimulate (other AML exports are not tested)</li> <li>▪ Windows 10 OS</li> <li>▪ .NET Framework 4.6.1</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>▪ Mechanical Engineer</li> <li>▪ Virtual Commissioning Engineer</li> <li>▪ Project coordinator</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>▪ EKS InTec GmbH</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>▪ Anton Strahilov, anton.strahilov@eks-intec.de</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>▪ License Required</li> </ul>	

*Latest update: 10.08.2020*

Name: <b>rfCSPy (SE)</b>		
Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>▪ AMLX container</li> <li>▪ FMUs</li> </ul>	<ul style="list-style-type: none"> <li>▪ Import AMLX as simulation configuration</li> <li>▪ Ran synchronized simulation based on FMI 1.0 &amp; FMI2.0</li> <li>▪ Communication with RF::Suite via ShM</li> </ul>	<ul style="list-style-type: none"> <li>▪ Ran Simulation results</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>▪ Real-time environment</li> <li>▪ rfCSPy FMI 1.0 &amp; 2.0 Co-Simulator               <ul style="list-style-type: none"> <li>▪ Use AutomationML with FMUs</li> </ul> </li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>▪ AMLX container exported via rfFmu2Aml               <ul style="list-style-type: none"> <li>▪ FMU must be on FMI standard 1.0 and 2.0</li> <li>▪ Windows 10 OS</li> <li>▪ Python 3.7</li> <li>▪ FMPy 0.2.11 Python Library</li> </ul> </li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>▪ Virtual Commissioning Engineer</li> <li>▪ Process Simulation Engineer</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>▪ EKS InTec GmbH</li> </ul>

Name: TUB Optimization Algorithm		
Input(s):	Main feature(s)	Output(s):
Optimization Request	The (unnamed) Optimization Algorithm implemented for SPEAR by TU Berlin	Optimization Result / Schedule
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>uses a genetic algorithm to find a (near) optimal production schedule for the given request</li> <li>takes into account, among others, different task modes, variable energy prices and availability, and intermediate resources, including e.g. the SoC of buffer batteries</li> <li>multi-objective optimization, can be used to optimize for energy costs, total energy usage, makespan, or a combination of those factors</li> <li>optionally, a graphical UI can be used for configuring the optimization, loading requests, and viewing the results and intermediate steps</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>Maven (for building)</li> <li>Java 11</li> <li>can be used “headless” or with graphical UI</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Researchers who want to extend the algorithms</li> <li>industrial users who want to adapt it to their own requirements not covered by the common API</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>TU Berlin</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>Tobias Küster &lt;tobias.kuester@dai-labor.de&gt;</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>Source code available upon request (negotiable, possibly to be open-sourced later)</li> </ul>	
		<i>Latest update: 31.08.2020</i>

Name: TUB Optimization Server		
Input(s):	Main feature(s)	Output(s):
Optimization Request (JSON)	Server providing different REST services, making available the TUB Optimization Algorithm following the Common API, as a Docker image.	Optimization Result / Schedule (JSON)
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>The afore-mentioned optimization algorithm, packages as a Docker image for easy deployment and use, providing the TUB optimization algorithm as a REST service following the common API</li> <li>a second service for configuring the optimization algorithm (e.g. what mutation operations to use)</li> <li>can be used via interactive Web UI or via REST service call</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>Docker Runtime, available for all OS</li> <li>about 800 MB of RAM for the image, possibly more for the shared Docker runtime itself</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Businesses who want to offer optimization services to clients</li> <li>industries who want to self-host the optimization server</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>TU Berlin</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>Tobias Küster &lt;tobias.kuester@dai-labor.de&gt;</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>Docker image freely available on Docker Hub</li> </ul>
