

# Exploitable Results by Third Parties

ITEA3 18030 MACHINAIDE

---

## Project details

Project leader:	Heikki Mesia
Email:	heikki.mesia@konecranes.com
Website:	<a href="https://www.machinaide.eu/">https://www.machinaide.eu/</a>

## Name: Twinaide

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>DT data from sources such as Kafka, RabbitMQ, InfluxDB</li> </ul>	<ul style="list-style-type: none"> <li>Interoperability and management of digital twins' data</li> <li>creation of digital twin hierarchy</li> <li>ability to pull data from different sources and display on graphics</li> </ul>	<ul style="list-style-type: none"> <li>Interoperable digital twin data that can be monitored and analyzed on a single platform</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>Ability to bring digital twins together</li> <li>Monitor real-time data from multiple sources</li> <li>Create own hierarchy using Azure DTDL,</li> <li>Flexible and user-friendly interface</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>API requests and user queries must come from the Twinaide UI</li> <li>Specific controllers must be added for each third-party provider</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Transportation managers</li> <li>Production managers</li> <li>Users in a large ecosystem with multiple digital twins</li> <li>External users without control over digital twins</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>Dakik Software</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>Kamer@dakikyazilim.com</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>Open-source license agreement must be followed</li> </ul>	

*Latest update: 13/02/2023*

Name: Contribution to the companion specification for material handling machines  
(Standardization)

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>Knowledge of material handling domain and OPC-UA</li> </ul>	<ul style="list-style-type: none"> <li>Standardized OPC-UA data model for cranes</li> </ul>	<ul style="list-style-type: none"> <li>Companion specification for cranes and hoists</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>Enables interoperability between different crane and other industrial machine vendors</li> <li>Compatibility with OPC UA CS for robots in factories and manufacturing</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>Needs IP capable networks or gateways</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Crane industries</li> <li>Smart factories and smart material handling and manufacturing</li> <li>Material handling domain and logistics, in general</li> <li>TRL 5 – technology validated in relevant environment (industrially relevant environment in the case of key enabling technologies)</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>Joint VDMA Working Group OPC UA for Cranes and Hoists</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>Link to the VDMA Workgroup: <a href="https://opcua.vdma.org/viewer/-/v2article/render/31851035">https://opcua.vdma.org/viewer/-/v2article/render/31851035</a></li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>Companion specification and node set will be freely available to registered OPC UA users.</li> </ul>	

*Latest update: 20/02/2023*

---

Name: Twinbase software

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>▪ Digital twin description documents in JSON or YAML format</li> <li>▪</li> </ul>	<ul style="list-style-type: none"> <li>▪ Modifies digital twin description documents to make them easily available</li> <li>▪ Distributes documents via an HTTP server that has both human and machine user interfaces</li> </ul>	<ul style="list-style-type: none"> <li>▪ Digital twin description documents</li> <li>▪</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>▪ Public Twinbase instances can be hosted on free-of-charge GitHub services</li> <li>▪</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>▪ Modifying the digital twin description documents is currently only possible via git operations</li> <li>▪ The exact format of the digital twin description documents is currently not standardized outside the Twinbase software</li> <li>▪ The exact protocol for fetching digital twin description documents is currently not standardized outside the Twinbase software</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>▪ Digital twin owners and users</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>▪ Aalto University</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>▪ Software available: <a href="https://github.com/twinbase/twinbase">https://github.com/twinbase/twinbase</a></li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>▪ Licensed under the open-source MIT License</li> </ul>

---

Name: Knowledge Graph-based Twin Data Management

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>DT data from TwinBase</li> </ul>	<ul style="list-style-type: none"> <li>List and manage (add / update / remove) entire digital twins</li> <li>Visualize knowledge graphs of digital twins</li> <li>Support semantic search interface</li> </ul>	<ul style="list-style-type: none"> <li>DT information</li> <li>DT knowledge graph</li> <li>SPARQL Results</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>Enable to support interoperability between DT platforms through TwinBase</li> <li>Query DT data semantically</li> <li>Monitor real-time data periodically through a Broker (with REST APIs)</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>Use JSON as a data exchange format</li> <li>Integrate with DT platforms through a Broker (with common REST APIs)</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>End user who want to know (or search) DT information</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>ETRI</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>yk_lee@etri.re.kr</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>TwinBase instance must be running</li> </ul>	

*Latest update: 20/02/2023*

---

 Name: Eclipse TRACE4CPS v0.1
 

---

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>Execution logs: timed events, signals</li> </ul>	<ul style="list-style-type: none"> <li>Generic execution log abstraction</li> <li>Model-centric (system executions over time)</li> <li>Analytics: library of generic performance analysis algorithms</li> <li>Customizable views providing insightful execution perspectives</li> </ul>	<ul style="list-style-type: none"> <li>Visualizations: Gantt charts of system executions incl. dependencies</li> <li>Execution trace analytics: critical path, execution comparisons, runtime verification based on MTL / STL specifications</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>Understand dynamic behavior of all kinds of systems by its domain-independent capabilities to visualize and analyze concurrent activities in relation to the system resources</li> <li>Supports the Acquire – Assess – Act feedback loop on the system digital twin</li> <li>Enables fusion of both operational controller data with domain models specified in low-code models</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>Java 8 / 1.8 (64-bit)</li> <li>Eclipse IDE version 2020-06</li> <li>install Eclipse TRACE4CPS™ feature from Eclipse TRACE4CPS™ update site, the feature includes Eclipse Modeling Framework (EMF), Xtext, Xtend, custom extension of JFreeChart 1.5.2</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Domain experts of high-tech equipment industry</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>Eclipse Foundation <a href="http://www.eclipse.org/trace4cps">www.eclipse.org/trace4cps</a></li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li><a href="mailto:bas.huijbrechts@tno.nl">bas.huijbrechts@tno.nl</a> (TNO-ESI)</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>EPL 2.0 license</li> </ul>	

*Latest update: 23/2/2023*

Name: OPC-UA based high speed data PLC interface

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>Instrumented (PLC) control software</li> </ul>	<ul style="list-style-type: none"> <li>High speed interface for low-level machine / control data</li> <li>Scalable data acquisition</li> <li>Based on open-source standard OPC-UA</li> </ul>	<ul style="list-style-type: none"> <li>Operational data-based applications: anomaly detectors, dashboards</li> <li>Insights into the usage and design of control models</li> <li>Behavioral analysis: python, Jupyter notebooks, machine learning</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>Disclosing data at high sampling rates makes it possible to real-time monitor (PLC) control software e.g. generated from low-code models</li> <li>OPC-UA standard ensures interoperability</li> <li>Closing the feedback loop: model / design → control software → generated data → behavior model → change insight</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>TNO proprietary Smart Connected Factory / Factory Explorer framework for data acquisition, storage &amp; visualization</li> <li>Common off the shelf open-source solutions as storage and analysis platform for data &amp; metadata, e.g. Kafka broker for distribution, InfluxDB for storing time-series data, XML / json for metadata, Grafana for analysis</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Service integrators of (PLC-based) industry equipment</li> <li>System designers, for feedback on design</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>TNO</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li><a href="mailto:jeroen.broekhuijsen@tno.nl">jeroen.broekhuijsen@tno.nl</a> (TNO-ACE)</li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>Usage (of interface software) under TNO licensing conditions</li> <li>TNO support is possible as B2B consultancy</li> </ul>	

*Latest update: 23/2/2023*

---

 Name: DTWeb python library

Input(s):	Main feature(s)	Output(s):
<ul style="list-style-type: none"> <li>Digital twin identifier</li> </ul>	<ul style="list-style-type: none"> <li>Fetches digital twin description documents from Twinbase</li> </ul>	<ul style="list-style-type: none"> <li>Digital twin description document as a python dict object</li> </ul>
Unique Selling Proposition(s):	<ul style="list-style-type: none"> <li>Makes accessing digital twin description documents simpler for client software programmed in python</li> </ul>	
Integration constraint(s):	<ul style="list-style-type: none"> <li>Currently works only for fetching digital twin description documents stored in Twinbase</li> </ul>	
Intended user(s):	<ul style="list-style-type: none"> <li>Software developers who need to easily access information about digital twins</li> </ul>	
Provider:	<ul style="list-style-type: none"> <li>Aalto University</li> </ul>	
Contact point:	<ul style="list-style-type: none"> <li>Available from PyPI as dtweb: <a href="https://pypi.org/project/dtweb/">https://pypi.org/project/dtweb/</a></li> </ul>	
Condition(s) for reuse:	<ul style="list-style-type: none"> <li>Licensed under the open-source MIT License</li> </ul>
