

An ITEA Smart Health project

PROFIT

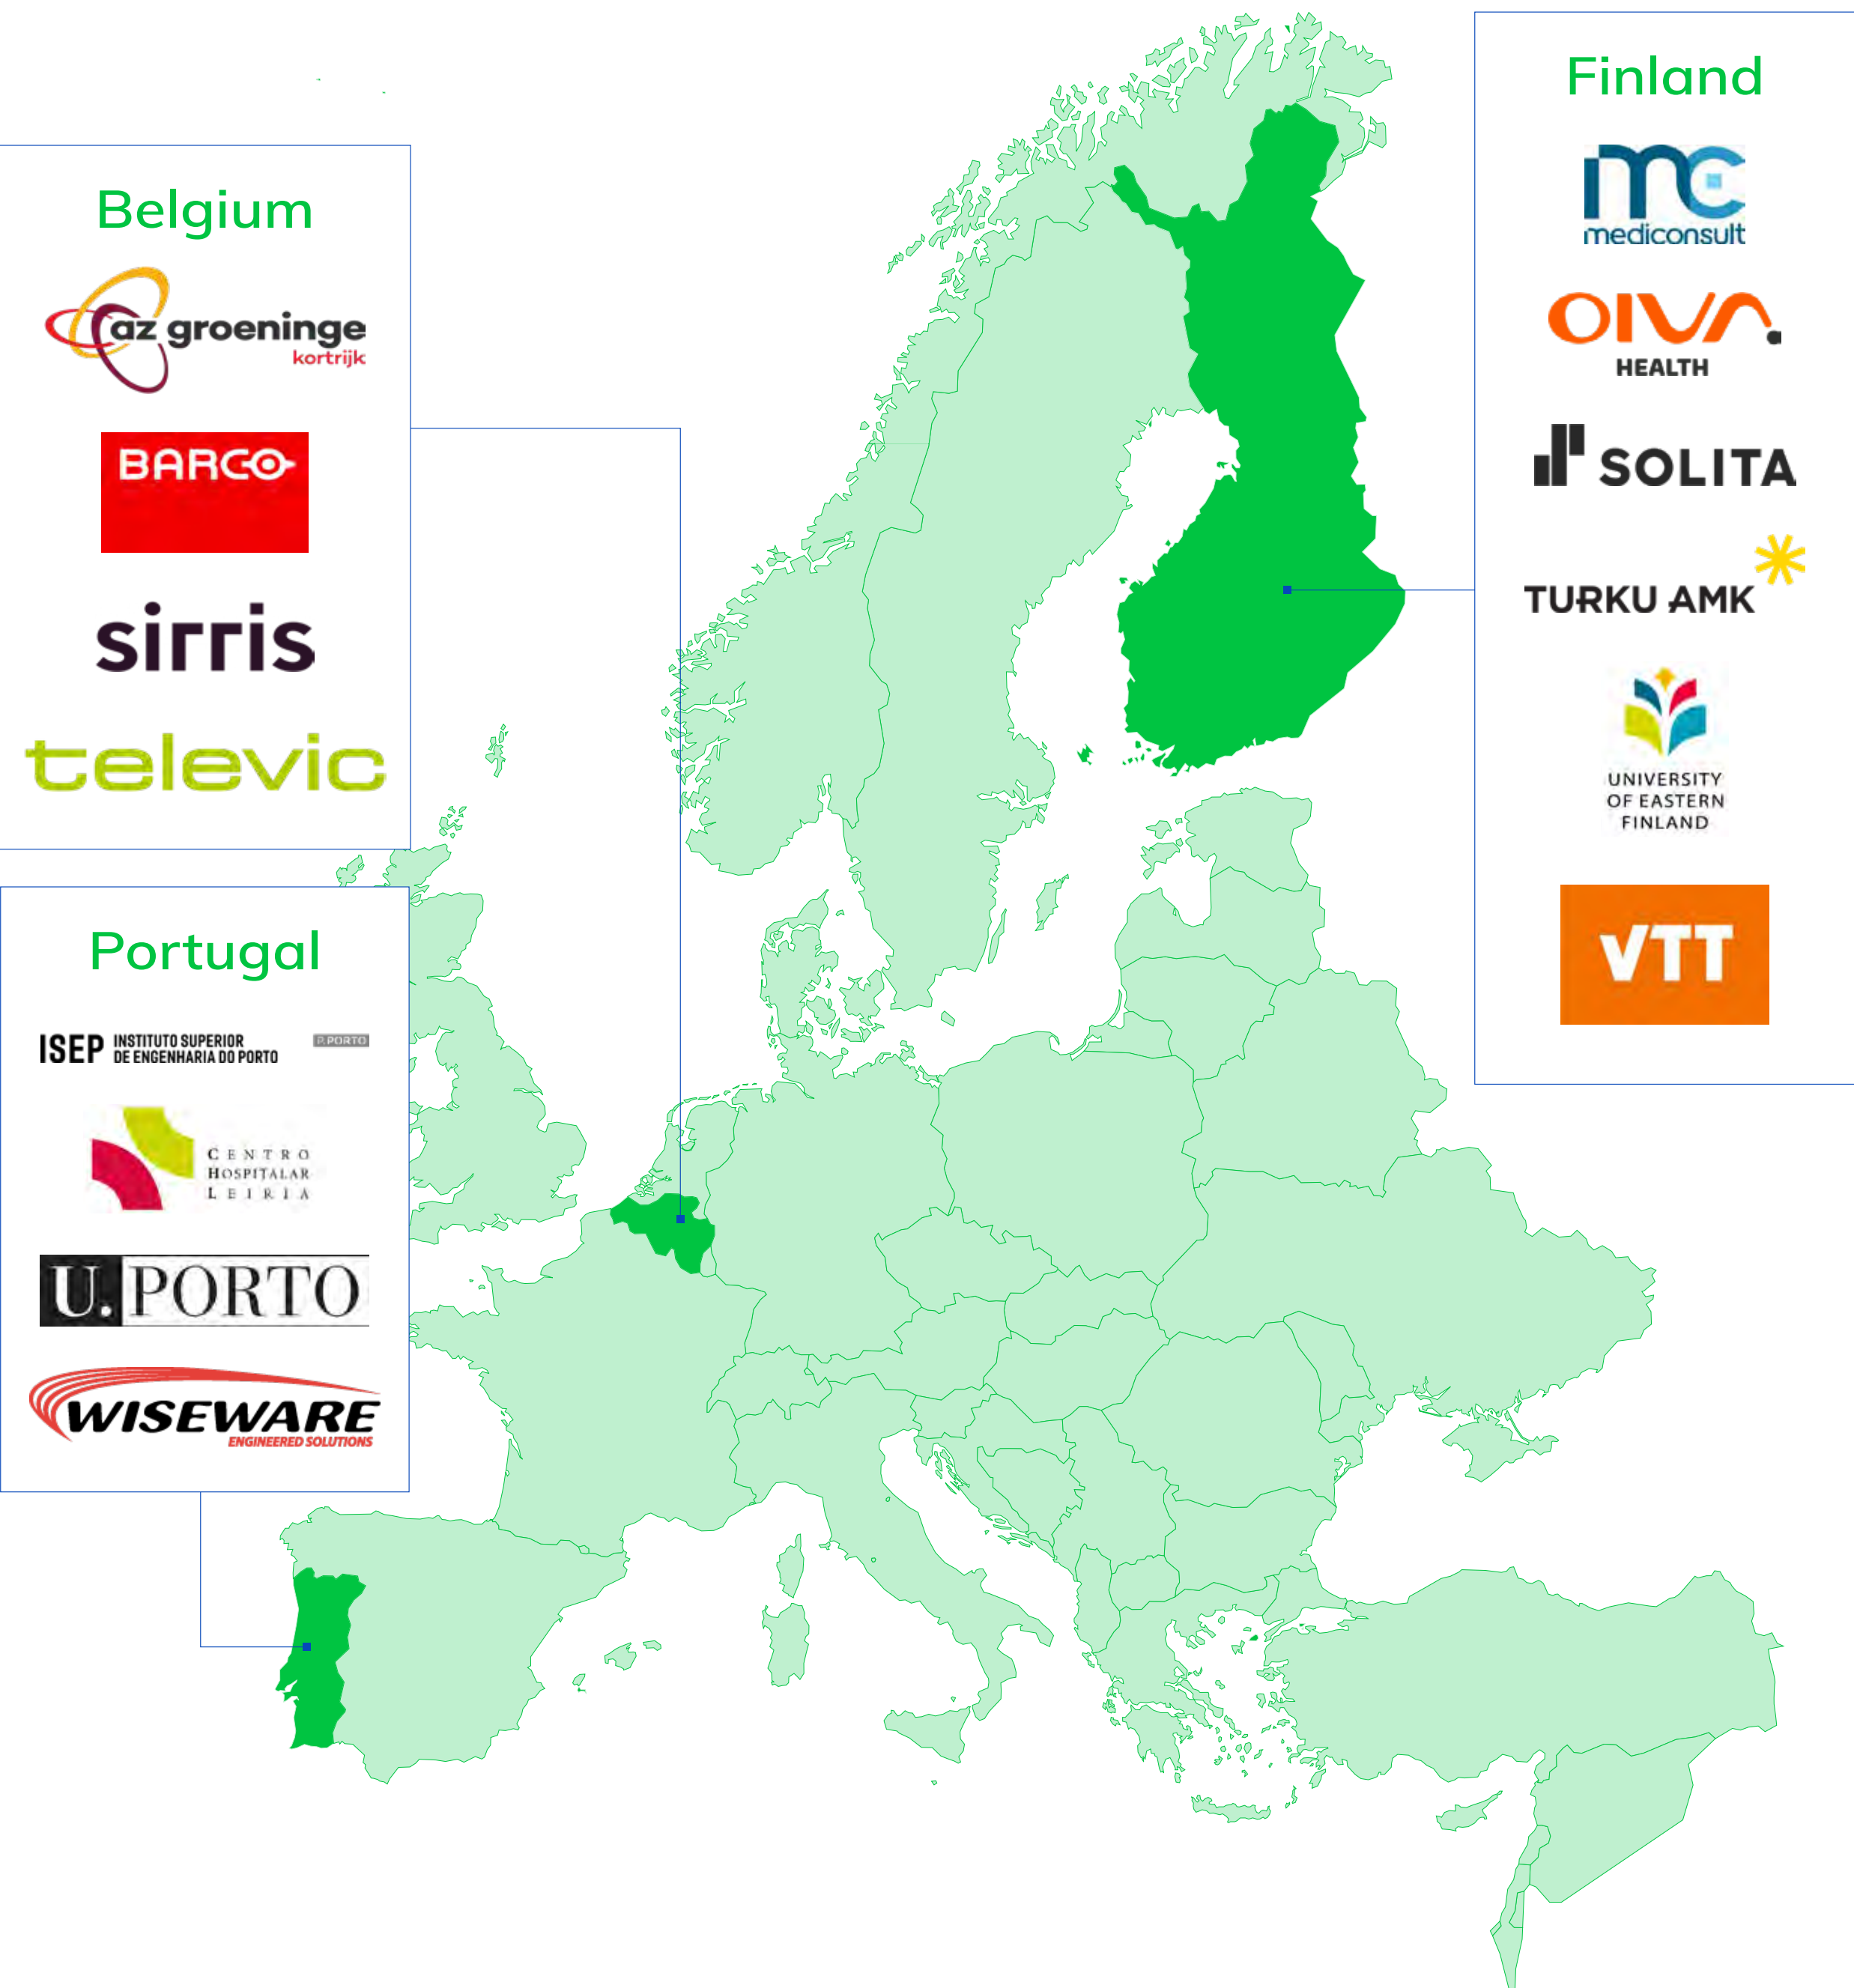

Optimising workflows to enable smart hospitals

Project summary

To optimise workflows and reduce staff burden in healthcare environments, the ITEA project PROFIT will enable smart hospitals via a facilitated and safe deployment of AI and the introduction of innovative solutions for asset management, alarm responses, operational efficiency, and clinical assistance and support to healthcare personnel.

Consortium

Project duration

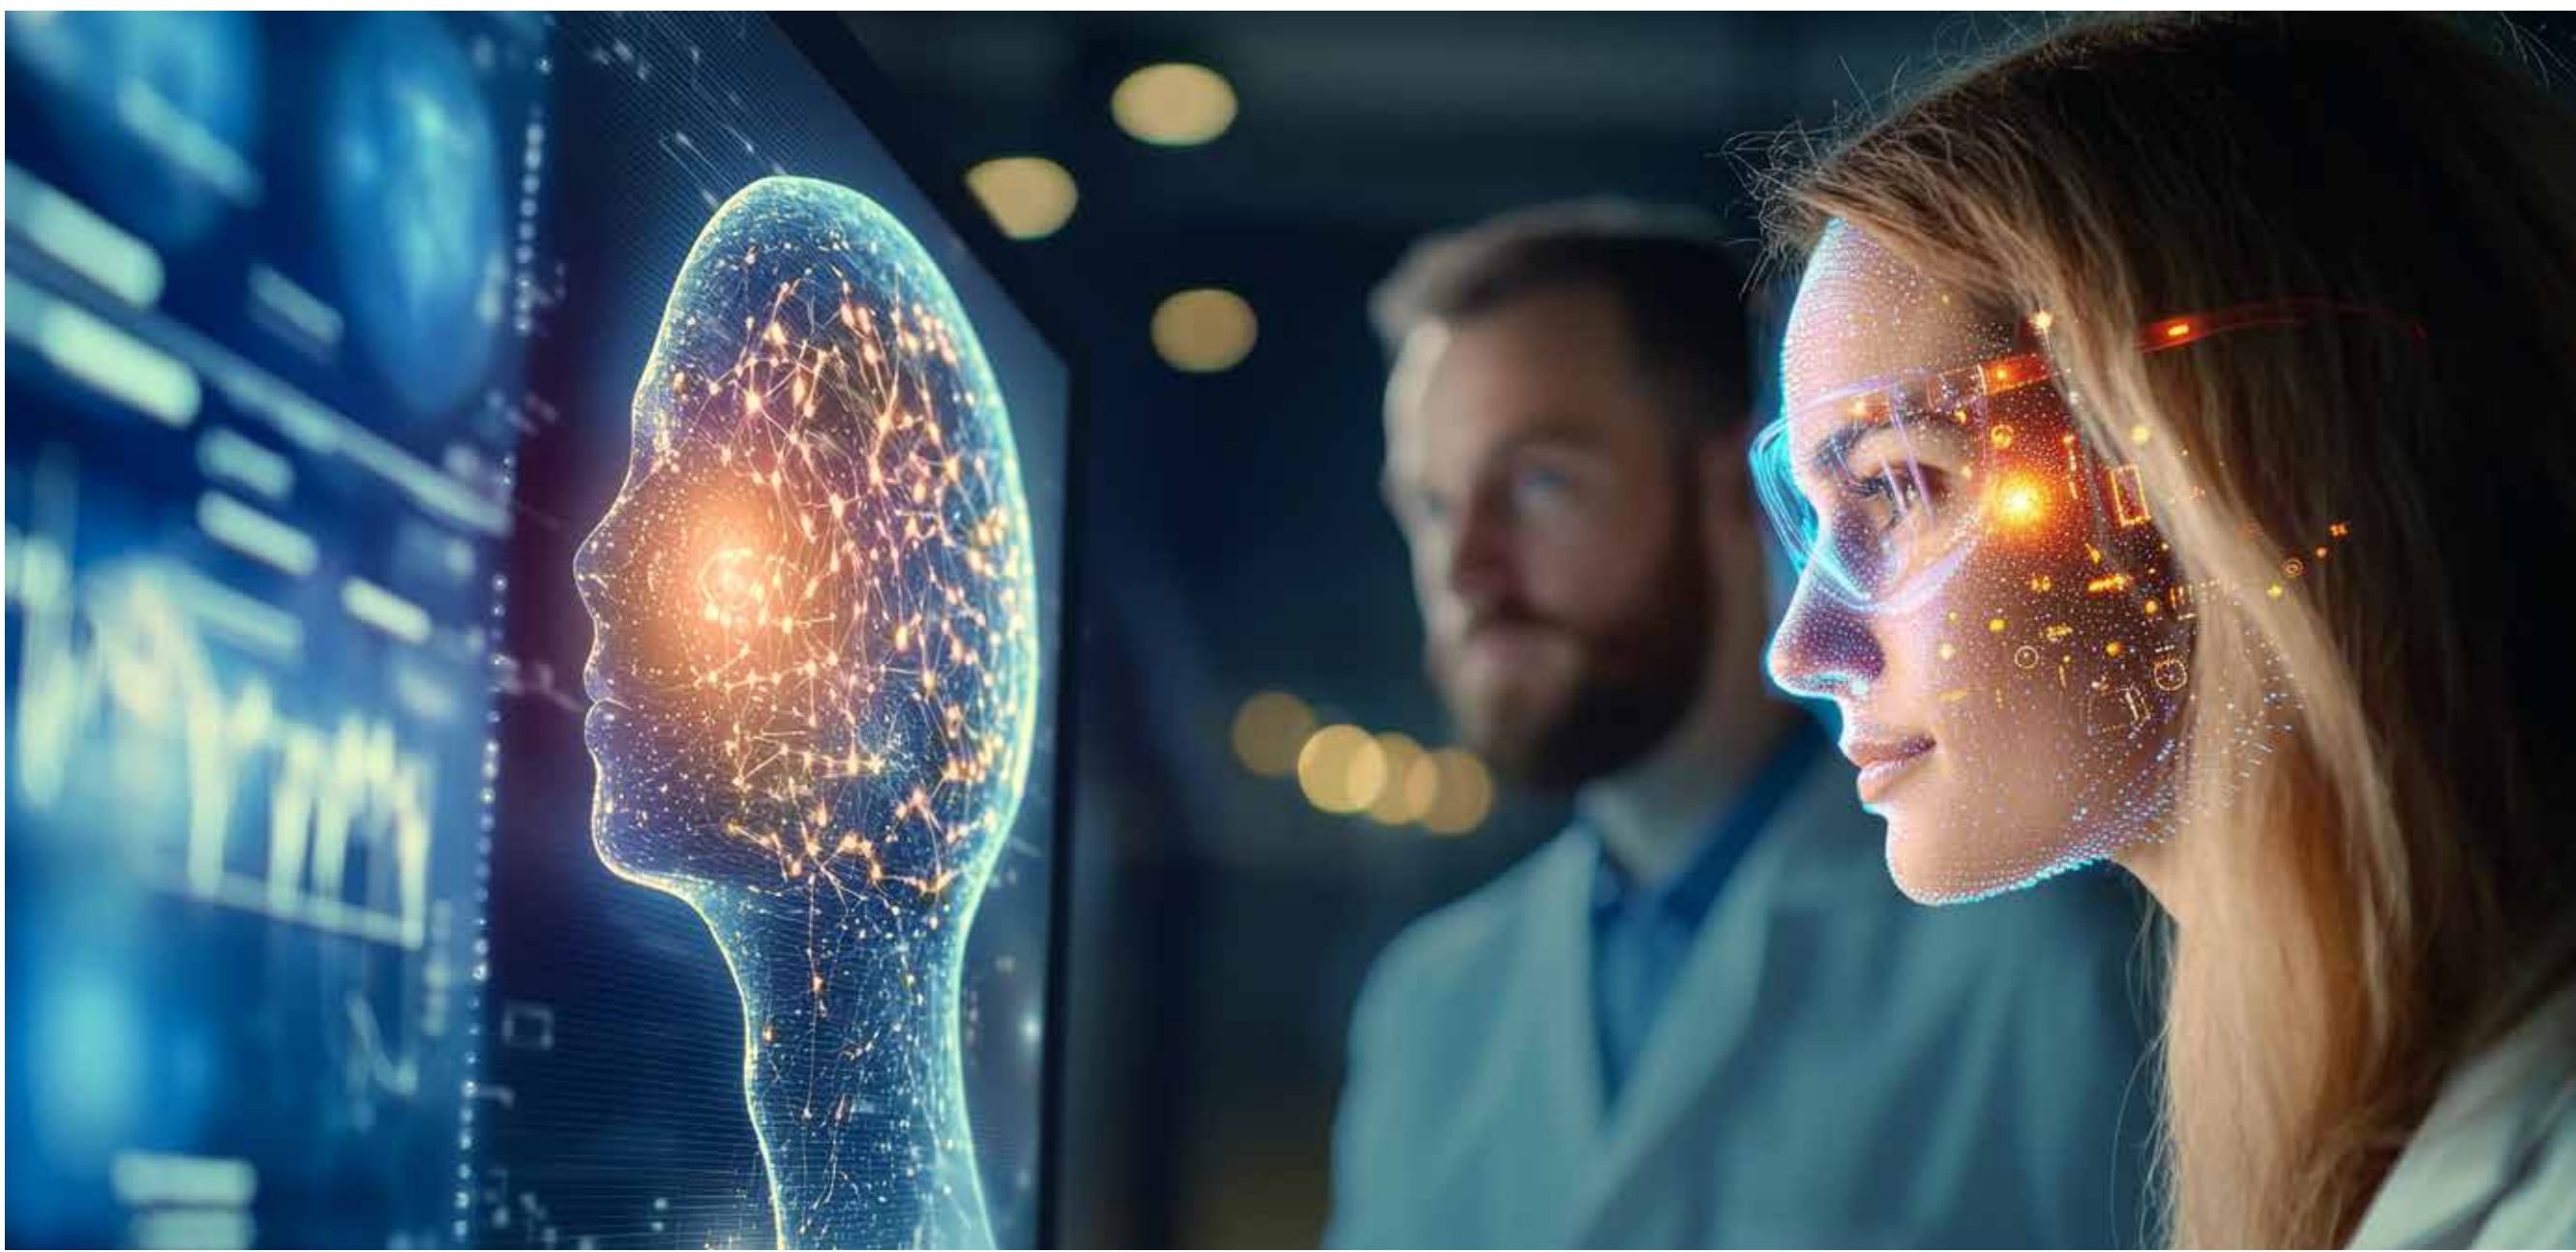

March 2024 - June 2027

Expected key results

- Smart management of alarm in the hospital and appropriate resources allocation
- Compute platform and QA framework for AI-enabled solutions in healthcare
- Digital home care and health prevention
- Smart asset tracking and management in the hospital
- Care pathway orchestration
- AI-aided documentation management

Technologies for optimising hospital processes
