

An ITEA Smart Health project

AdOff

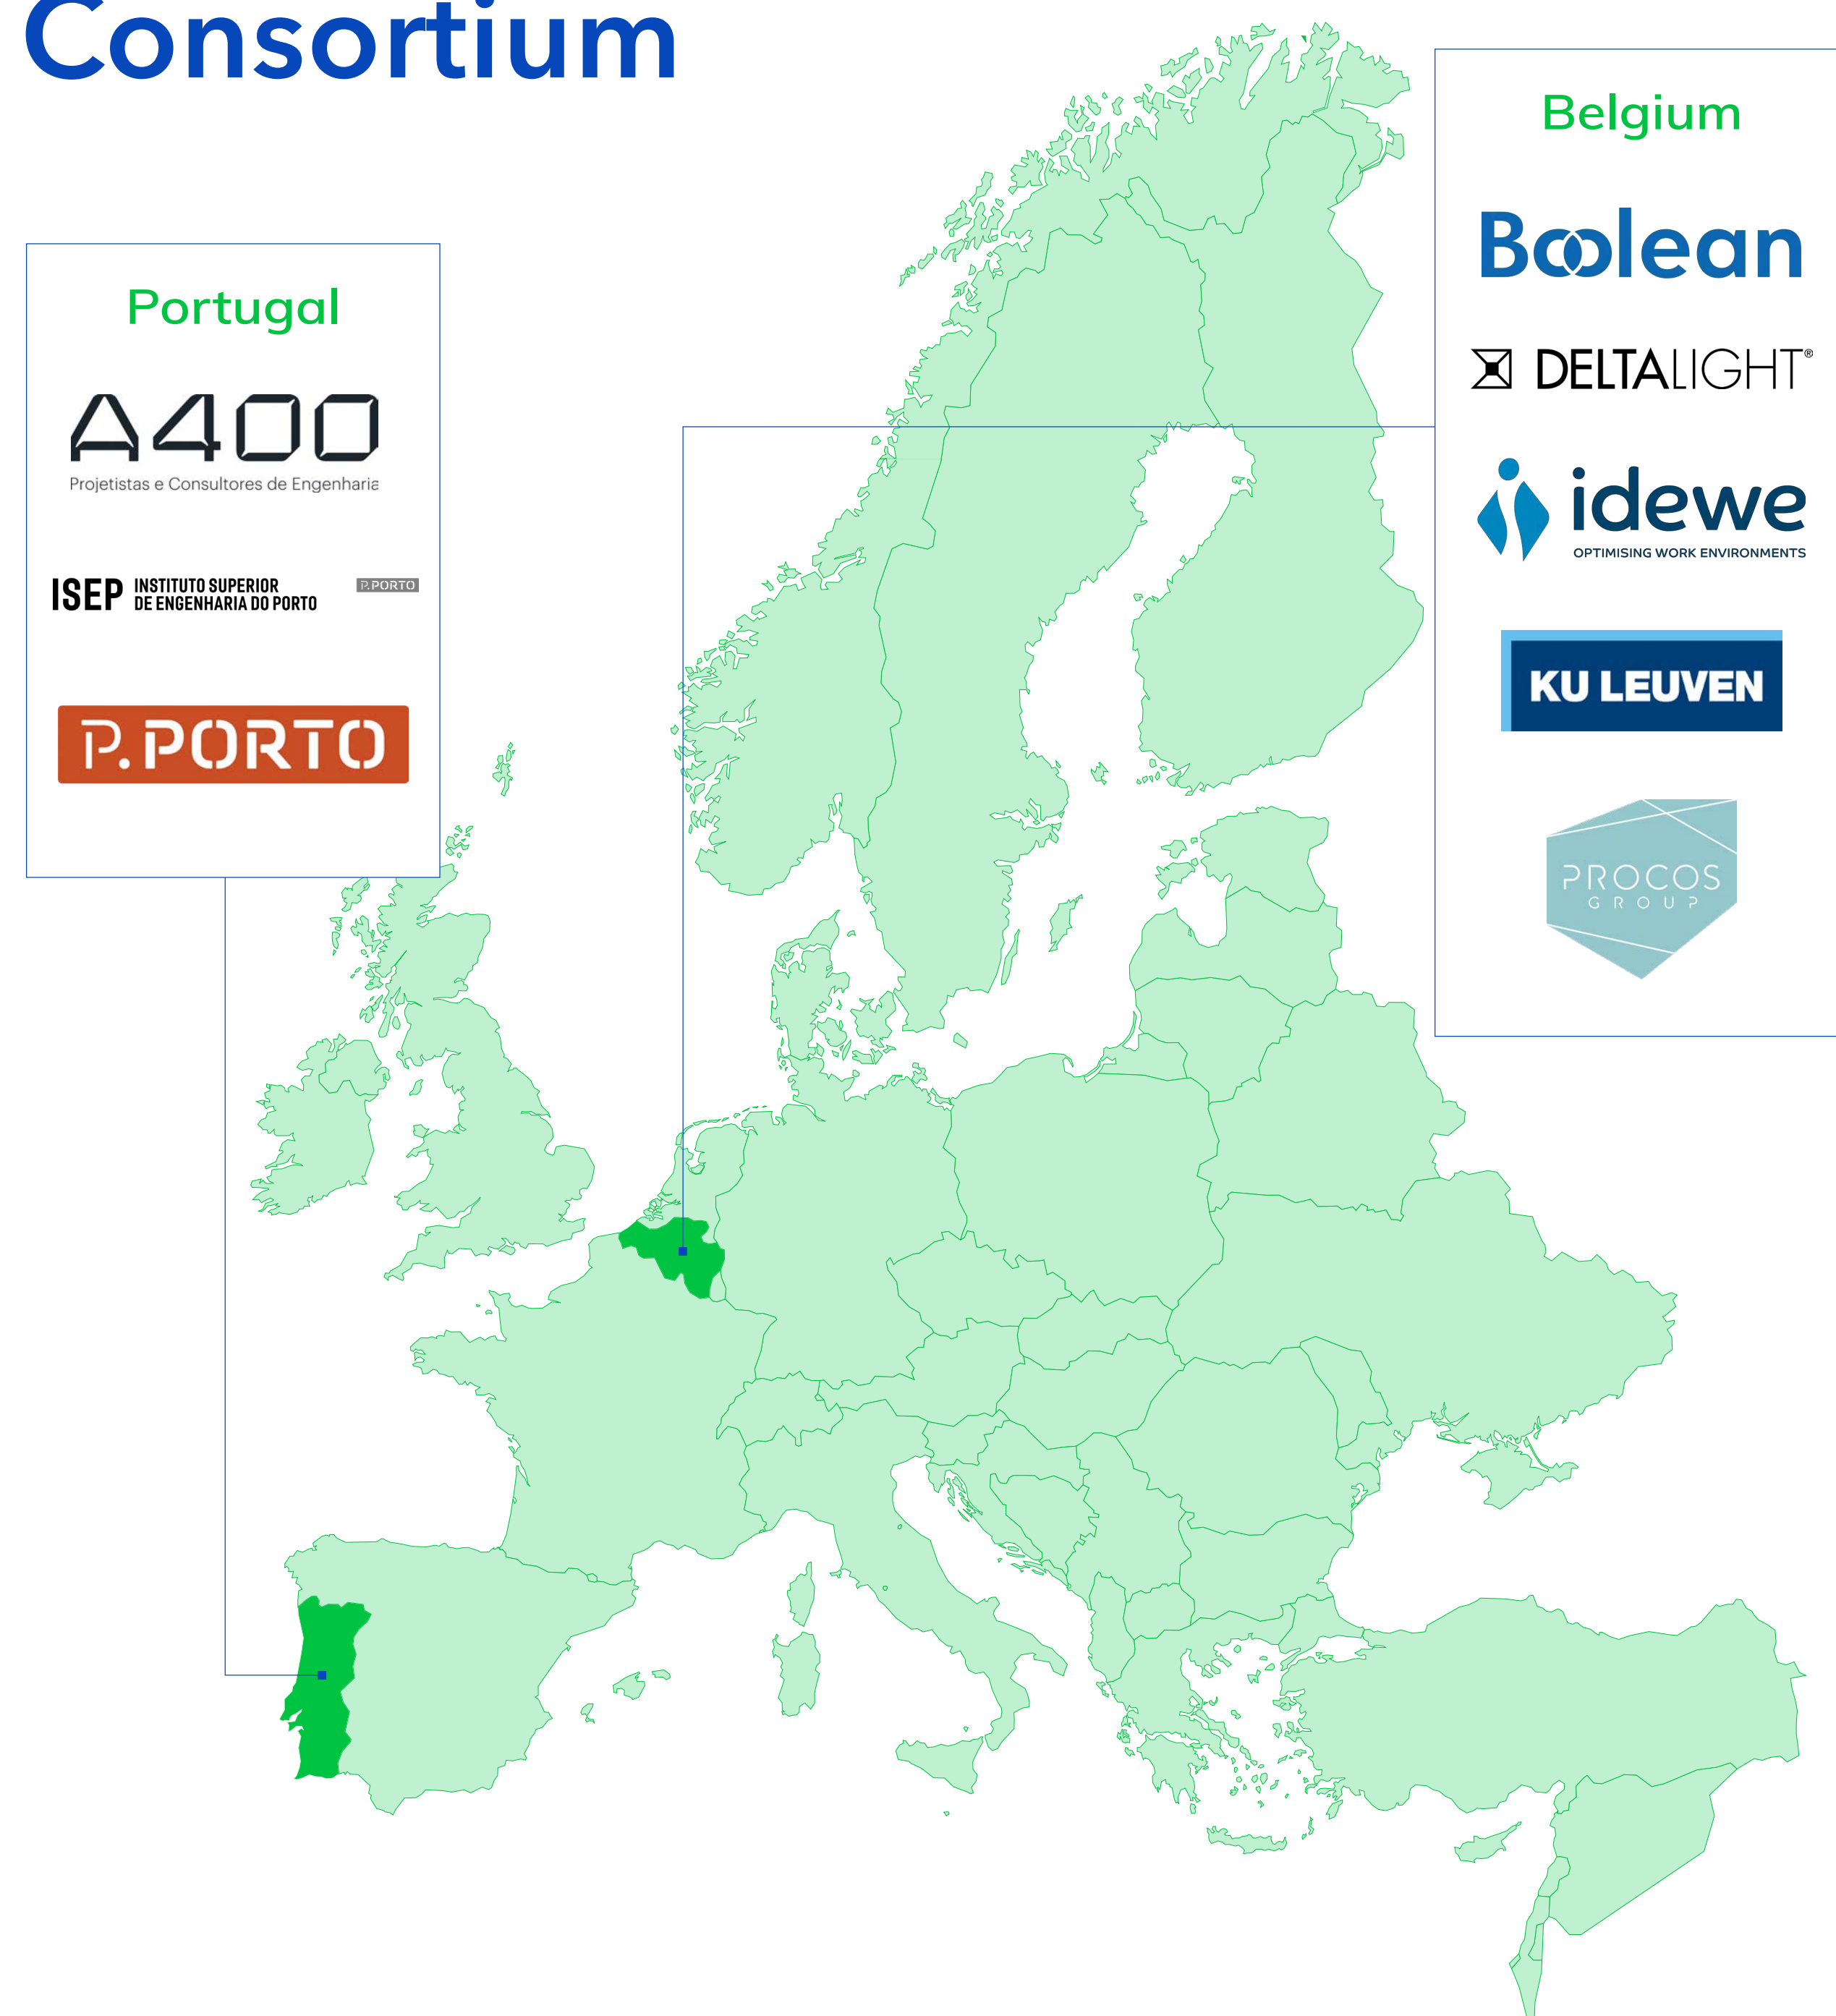

A worker-centric approach to adaptive office technologies

Project summary

By developing adaptive office technologies that combine automated and voluntary data, the ITEA project AdOff will offer evidence-based tools to identify and address negative office situations according to worker's personal preferences. With these innovations the human will be placed at the center of the office management decision making.

Project duration

June 2025 - May 2028

Expected key results

- Personalised office adaptation through human-in-the-loop integration
- Interoperable platform integrating sensors & user feedback for office management
- Healthier workplaces with up to 15% higher employee wellbeing
- Energy cost reduction by up to 10% through smarter office management

Adaptive Office
