

An ITEA Smart Communities project

Narrate

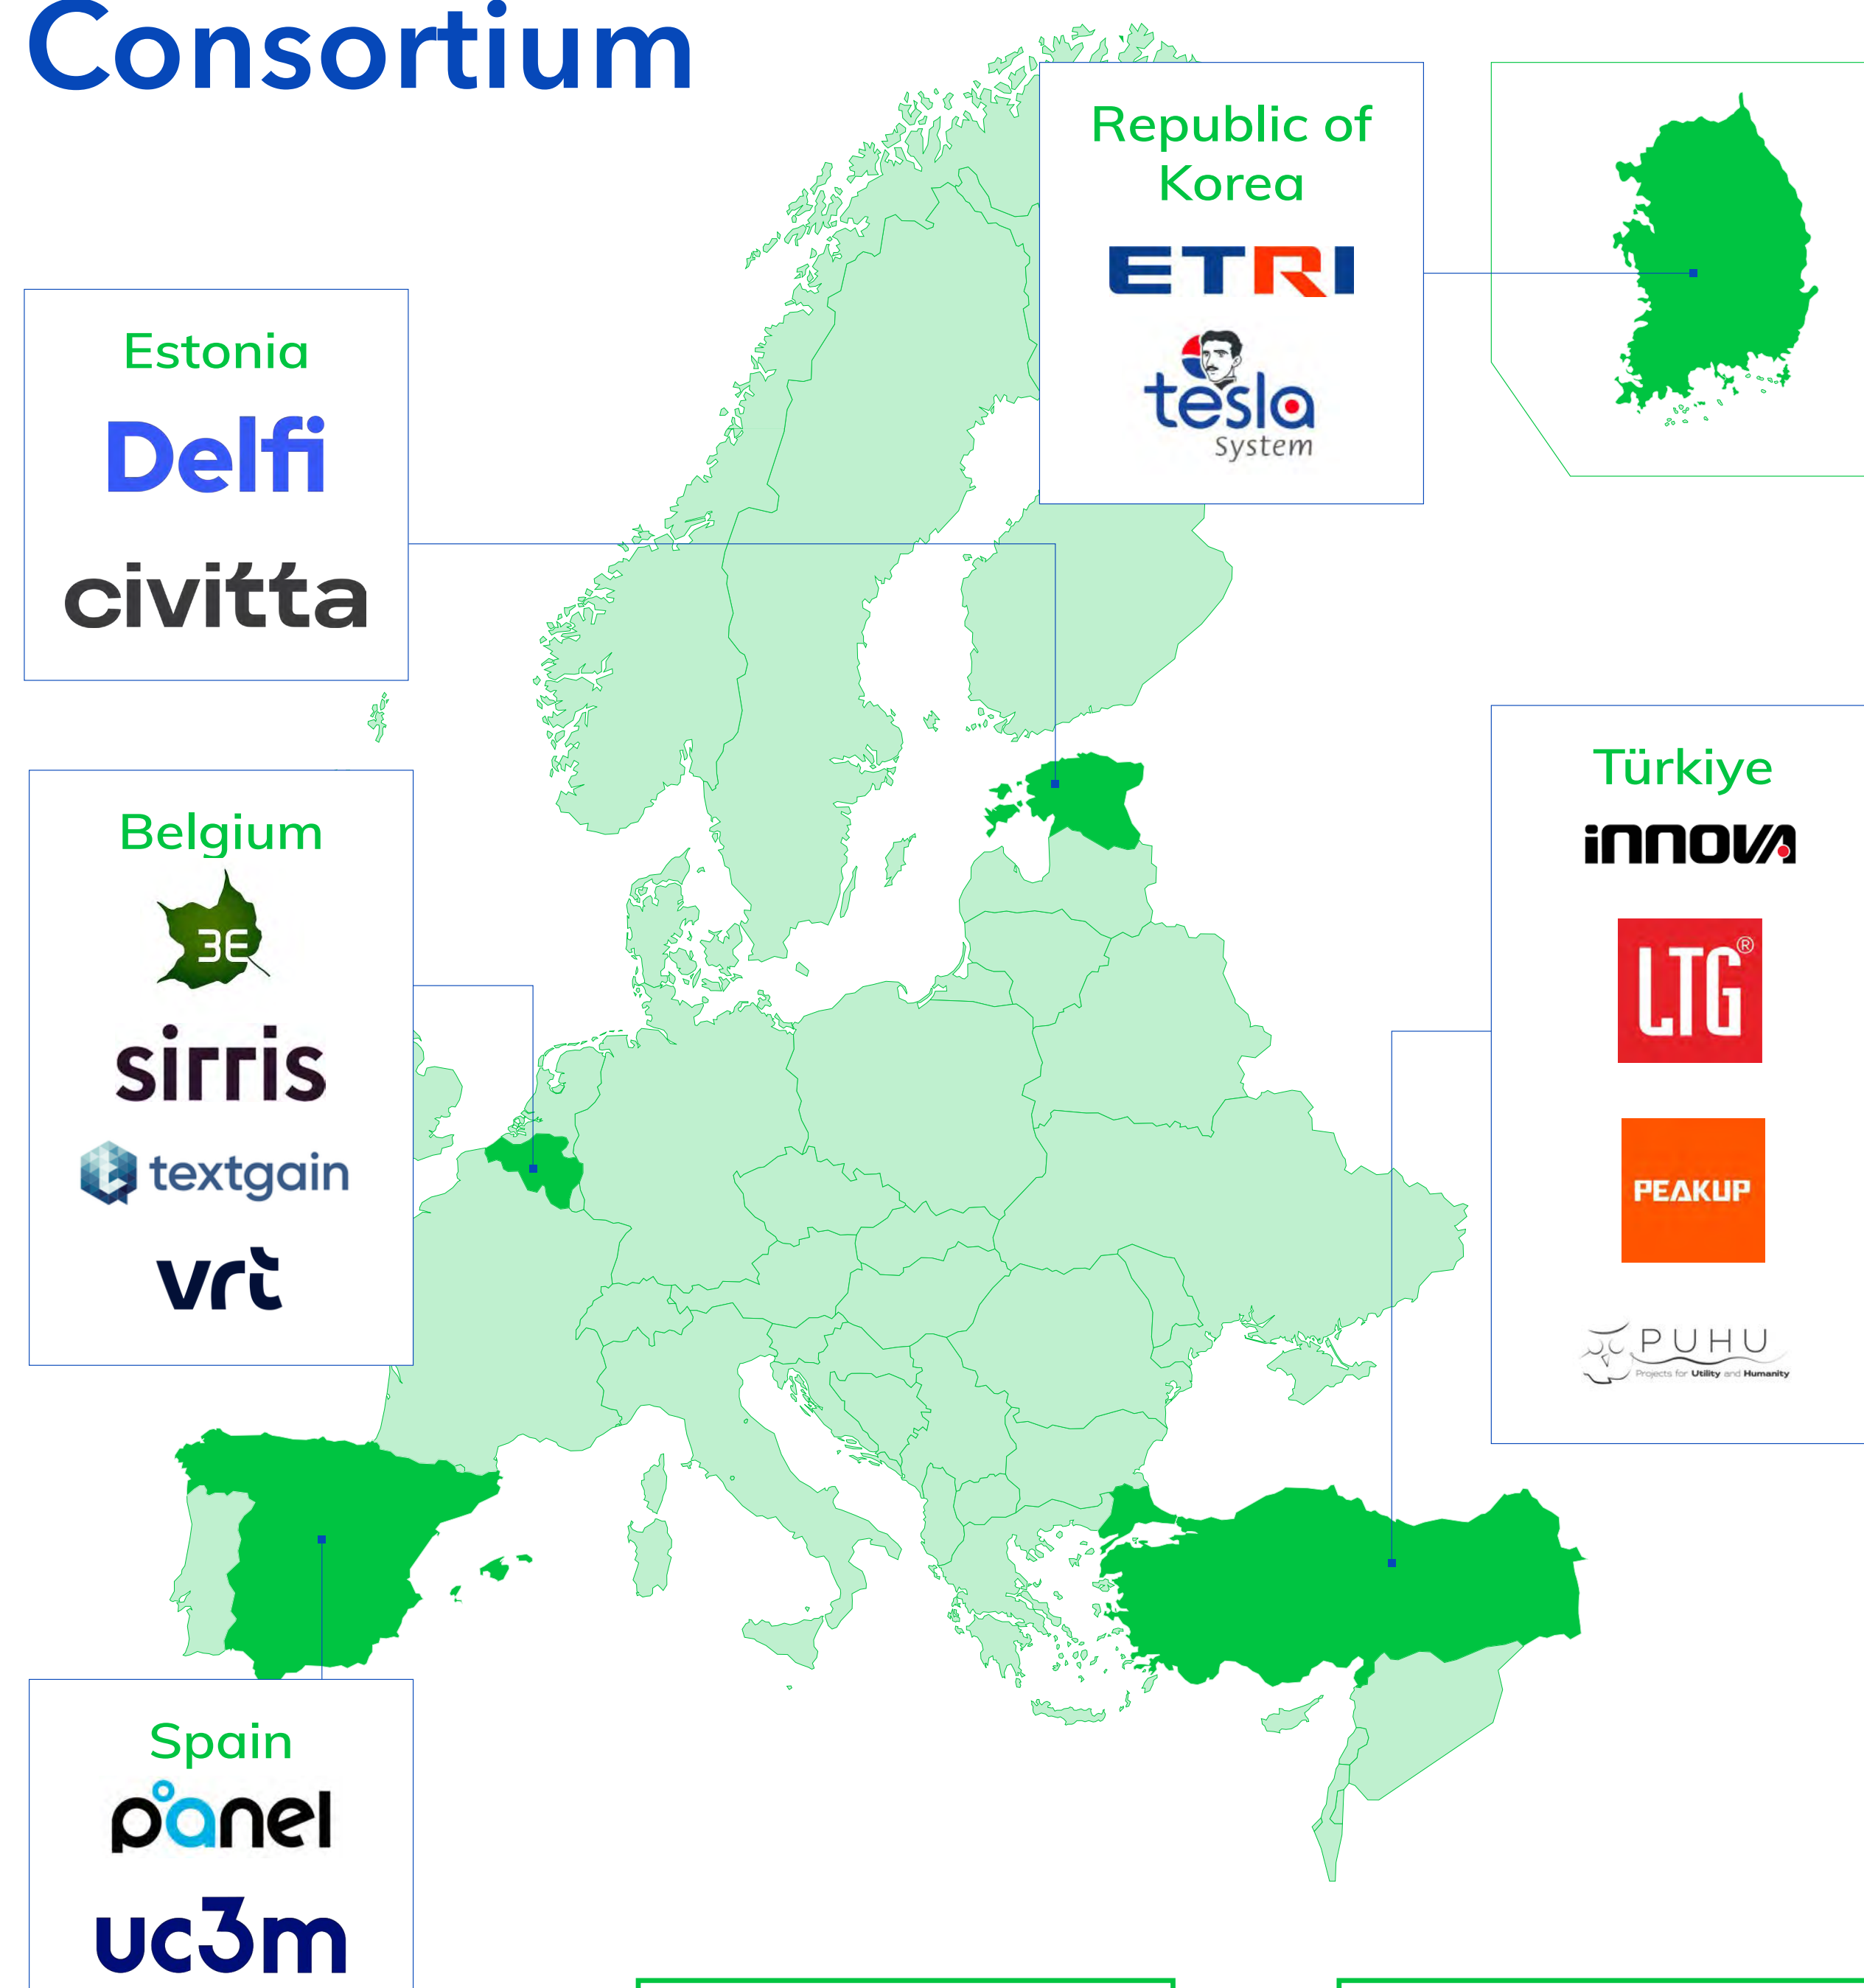

Trustworthy, adaptive conversational AI across domains
Media • Human Resources • Engineering Software Services

Project summary

Narrate develops a modular platform and methodology for trustworthy, domain-aware conversational AI, combining specialised and general-purpose AI models, domain knowledge, intelligent orchestration, narrative design and multimodal interaction. By developing and evaluating use cases across media, human resources and engineering software services, Narrate identifies reusable building blocks that can be shared across domains and requirements that need domain-specific solutions.

Consortium

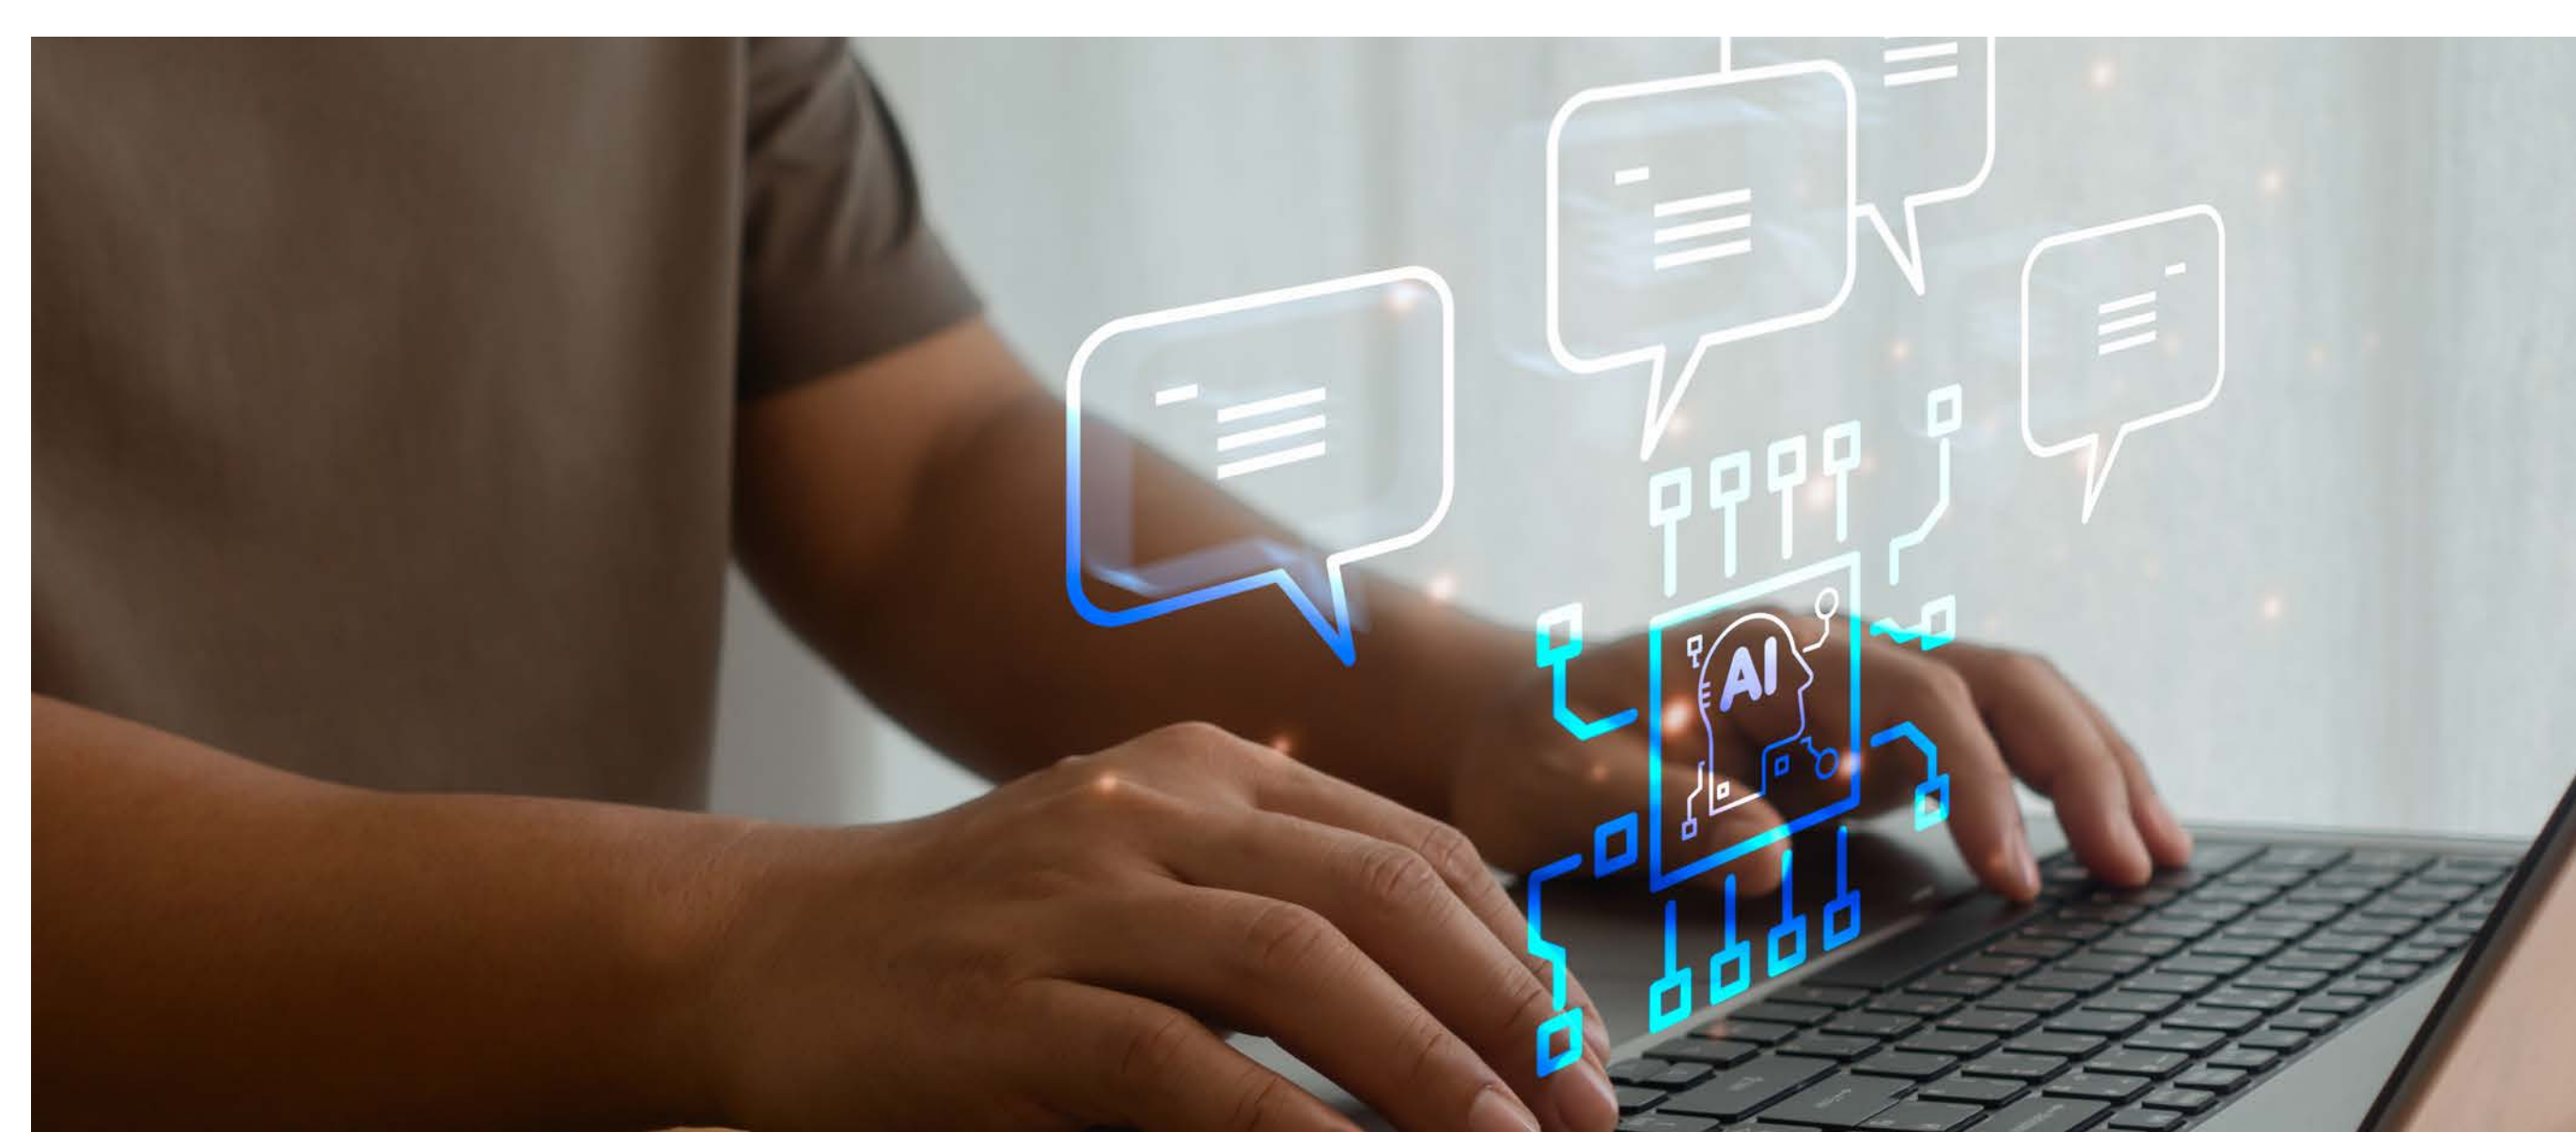

Project duration

February 2025 - January 2028

Expected key results / USPs

- Modular architecture integrating specialised and general-purpose AI models, conversational agents and trusted domain knowledge
- Domain-aware, personalised and multimodal conversational experiences
- Trustworthy AI by design, with privacy, transparency and ethical safeguards
- Reusable methods and building blocks validated across media, human resources and engineering software services
